

THE PROTOCOL SYSTEM

A structured approach to bacterial testing.

Better data. Better decisions. Better outcomes.

STEP

1

IDENTIFY

Who to test

Target the right patients for the right reasons.

- Bleeding gums or bone loss
- 5mm+ periodontal pockets
- Implant planning or inflamed implants
- SRP not responding as expected
- Systemic health conditions
- Maintenance patients with bleeding

STEP

2

PLAN

When to test

Use testing at key moments for maximum impact.

- New patient exam
- Before SRP to guide treatment
- Recare/maintenance with bleeding
- Implant placement or complications
- When inflammation persists

STEP

3

COLLECT

The sample

Simple collection. Powerful insights.

- Sample from 5 deepest pockets
- Place paper points into vial
- Complete patient form
- Use prepaid return mailing kit
- SRP may begin while waiting for results

STEP

4

GET RESULTS

Fast. Clear. Actionable.

Reports in ~72 hours with treatment guidance.

- Online secure portal
- Easy-to-read report
- Bacterial levels & risk assessment
- Treatment recommendations
- Antibiotic guidance when indicated

STEP

5

IMPLEMENT & IMPROVE

Deliver better outcomes.

Personalize care. Improve healing. Retest to confirm success.

- Implement personalized treatment plan
- Monitor healing & patient compliance
- Retest in 6–12 weeks
- Track improvements over time
- Stronger results. Healthier patients.

WE'RE WITH YOU EVERY STEP.

Complimentary training, clinical support, and resources to help your team implement with confidence.
